1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

2. The disclosure is objected to because of the following:

35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise and exact. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are: "(" (page 2, line 28); TM(tn); ⊗V/V etc.

Appropriate correction is required.

3. A substitute specification in proper idiomatic English and in compliance with 37 CFR 1.52(a) and (b) is required. The substitute specification filed must be accompanied by a statement that it contains no new matter.

4. Claims 4-7 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim *cannot depend from any other multiple dependent claim*. See MPEP § 608.01(n). Accordingly, the claims 4-7 have not been further treated on the merits.

5. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the position signals A,B; signals S1,S2; and two sensitive elements (claim 1) must be shown or the feature(s) canceled from the claim(s).

No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

6. Claims 1-7 are objected to because of the following informalities:

In claims 1-7, all symbols or characters e.g. TM(tn); ⊗V/V are not recognized;

In claim 1, there is no antecedent basis for "same axle" at line 20; the phrase "is able to" is vague since it is not positively recited;

In claim 3, the phrase "output signal resolution to be increased" is not clearly understood; it is unclear as to what the output signal resolution and how it is increased;

In claim 5, there is no antecedent basis for "non-drive wheels";

In claim 6, "it is implemented" is vague as to what is implemented! It is also unclear as to what the set driving conditions.

Appropriate correction is required.

7. The disclosure is objected to because of the following informalities: It is unclear as to what Vg and Vd are.

Appropriate correction is required.

8. Applicant is requested to provide copy of each reference cited on IDS.

9. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 (insofar as understood) are rejected under 35 U.S.C. 102(b) as being anticipated by EP 0 353 995.

'995 discloses a method for determining the absolute angular position including a steering wheel H of a motor vehicle with respect to chassis of the vehicle with a device 2 for measuring the relative position of the steering wheel including an encoder; a fixed sensor and a means for determining the absolute angular position by determining offset and the angular position (fig. 1; page 2, lines 26-page 5, lines 35).

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note PTO-892.
